SyselShare

Powered by NetExplorer

'Your data shared among all your employees in total security,

Companies produce ever increasing amounts of electronic data, but frequently this data is poorly protected. It has been estimated that one out of every four companies does not adequately protect its data, and that one company in two does not possess an effective and secure method of sharing data. Employees exchange and share data using 'Dropbox' type applications, which are completely outside any form of company control.

SyselShare offers a custom-built solution tailored to your specific needs. The system is based on NetExplorer, is flexible and simple to use, and it enables you to manage both the users and the structure and volume of the data to be shared. Data-sharing is secure and encrypted, and access is subject to a pre-defined access hierarchy.
